

Traktor Pro x APC40 2 Decks + 2 FX Basic DJ System

By Jan Vincent Munoz

Layout is quite straightforward. The rest of the buttons that have no mappings are VU LED meters for Master Volume (Scene Launch buttons), Level Meters for each deck A & B (Activator/Solo/Record Arm), they can be assignable/mapped as well for more customization.

- 1) The Master selection button toggles as Browser Mode for quick song searching.
- 2) The sliders 3/4/7/8 are not mapped, I left it blank for those who want to use it for effects or other uses.
- 3) In the browse button, use Up & Down buttons to navigate/scroll across the playlist/tracklist. The Left & Right buttons are for loading tracks (Left = Deck A // Right = Deck B)

Mapped this using Traktor Pro version 2.6.7
